

The Bocq Quarries

PETIT GRANIT - BELGIAN BLUE LIMESTONE® | PETIT GRANIT DU BOCQ

LOCAL QUARRIES FOR A QUALITY SERVICE

The TROU DES CHATS QUARRY in Dorine is situated south-west of the centre of Spontin, two kilometres from the E411 motorway. Petit granit – Belgian blue limestone is quarried there and is used for construction purposes and as ornamental stone.

The CHANSIN QUARRY is situated in the Bocq valley, near the hamlet of Chansin. Blue limestone is quarried there and has taken the name of “Petit Granit du Bocq” because of its location. It is characterised by its concentrations of crinoids and fossils, its bluish appearance and the deep black colour that it acquires when polished. These features mean that it is unique in Belgium and stands out from other varieties of blue limestone.

Petit granit - Belgian blue limestone | Grey grinded (scale 1:1)

Bocq Blue limestone | Honed (scale 1:1)

Carrière de Chansin - 5530 DURNAL

TECHNICAL CHARACTERISTICS

MINERALOGICAL COMPOSITION

Calcite 96-99 %, traces of quartz and of pyrite

ATTRIBUTES / PERFORMANCE

These data are available on www.pierresetmarbres.be and on the sites of the official bodies, they are measured according to the procedures of European standards in force and regularly updated.

MAXIMUM DIMENSIONS OF BLOCKS*

Length
3 m

Width
2.5 m

Thickness
3.5 m

MINIMUM THICKNESS FOR APPLICATION*

2 cm

Bocq Blue limestone

ALSO KNOWN AS
Petit granit du Bocq

TYPE
Compact crinoidal limestone

STRATIGRAPHICAL AGE
Mid-Tournaisian (Lower Carboniferous, Palaeozoic)

APPEARANCE, COLOUR AND PATINA

Compact and non porous, this rock displays many remains of crinoids, which vary in size and are unevenly distributed. It also contains large coral fossils standing out white against the dark background of the rock. Dark in colour, from grey-blue to blackish-grey, it appears more blue in tone when a sanded finish is applied, whilst polishing accentuates the black background, against which the white fossils are clearly visible.

FINISHED PRODUCTS AND STANDARD DIMENSIONS

As is the case with blue stones in general, this material is used in several different ways, for interior and exterior applications alike. These include : plinths, façades, rubble stones, floor tiles and setts, edging and doorsteps, surrounds for bay windows, window sills, steps, wall coverings, tiles for interior decor, skirting boards and worktops.

Dressed stones

length 30-150 cm, width 10-60 cm, thickness 2-30 cm

Floor tiles

Length 30-60 cm, width 15-60 cm, thickness 2-5 cm

It is not advisable to order a piece with a surface area over 0.5 m² and length exceeding 1.5 m. For anything over these dimensions, it is necessary to take specific measures when the material is being applied.

Non-standard dimensions and advice on application and maintenance can be obtained directly from the producer.

DESCRIPTIVE SPECIFICATIONS

«Crinoidal limestone, grey blue in colour, stratigraphical age Mid-Tournaisian (Lower Carboniferous, Palaeozoic), belonging to category [to specify] in accordance with classifications taking account of specific features regarding structure and appearance as established in technical information note n°220 of the C.S.T.C.».

Petit granit | Belgian blue limestone

ALSO KNOWN AS

Blue stone, *Petit granit - Pierre bleue de Belgique®*

TYPE

Crinoidal limestone

STRATIGRAPHICAL AGE

Upper Tournaisian (Lower Carboniferous, Palaeozoic)

APPEARANCE, COLOUR AND PATINA

This stone is characterized by the presence of many fossil remains, cemented together by a microcrystalline gangue containing very finely divided carbon. When the stone is freshly broken, the fossils produce a sparkling effect through the action of the light on the facets. The crinoids, corals and shells stand out pale against a dark background, which varies from light grey to black, through a range of bluish shades, according to the finish. The stone becomes lighter with exposure to harsh weather conditions, through the surface washing of the interwoven carbon.

FINISHED PRODUCTS AND STANDARD DIMENSIONS

This stone is widely admired for the numerous cuts and finishes it can take, as well as for huge range of sizes it can be given. It may be applied in several different ways, both inside and out : plinths, façades, as rubble stones, wall coverings, exterior tiles and setts, borders, doorsteps, stairs, surrounds for bay windows, window sills, interior paving, covering for interior walls, skirting boards, worktops, covering for bridges, rockfill, street furniture, as well as all the applications for marble-work, dressing and sculpture.

Dressed stones

length 30-150 cm, width 10-60 cm, thickness 2-30 cm

Floor tiles

length 30-60 cm, width 15-60 cm, thickness 1-5 cm
free length, width 15/20/25/30/40 cm

Doorsteps

thickness 5/8/10 cm

The surface areas of each element should ideally measure less than 0.5m². Their length should not exceed 1.5 m. For anything larger, it will be necessary to use specially adapted methods when applying the material and the distinctive visual characteristics inherent in all natural matter will have to be borne in mind.

Non-standard dimensions and advice on application and maintenance, can be obtained directly from the producer.

DESCRIPTIVE SPECIFICATIONS

«Petit granit - Belgian blue limestone, crinoid limestone, grey-blue in tone, stratigraphic period Upper Tournaisian (Lower Carboniferous, Palaeozoic), belonging to the category [to specify] in accordance with the classification taking account of particular features regarding structure and appearance, as established in technical information note n° 220 of the C.S.T.C. (2002).

This stone comes from quarries holding the Technical Approval certified by the U.B.A.tc, which covers the entire deposit. The finish and appearance will match the samples presented to the individual carrying out the project in question; these three contractual samples will show the standard appearance and the two extremes of variation allowed within the market.

Equivalence: Any proposed product or finish differing from the description given above must undergo the equivalence procedure described in manual 100.2 published by the department of construction quality at the Ministry of Communications and Infrastructure, now the Federal Public Service for the Economy.»
